

# 1 Sharing Projects Between Devices

**Important:** The following instructions apply to sharing project files between **iOS devices (iPads or iPhones)** using AirDrop. If you are using **Android**, the steps are nearly identical, but note the following critical difference:

- **iOS:** Project backups are saved in the StraboField folder.
- **Android:** The project must be exported to the device before it can be accessed. Once exported, project backups are saved in the StraboSpot2 folder.

Be sure to use the correct folder name when locating or saving backup files on your device.

## Step-by-Step Instructions: Backup

### 1. Back Up the Project on the Sending Device: iOS and Android

- Open the **StraboField** app.
- Go to: Home → Upload, Backup & Export → Backup Project to Device.
- You may rename the backup or keep the default name format timestamp\_project-name.
- Tap BACKUP to save the file locally on your device.

### 2. Access the Backup File: iOS

- Still in the Upload, Backup & Export screen, tap View/Edit Files on Device. This will open the iOS **Files** app.
- Alternatively, open the **Files** app from the iPad Home Screen.
- **Important:** The Files app will open to the last accessed folder. To locate your StraboField files:
  - Navigate back to the **Browse** screen.
  - Select On My iPad (or On My iPhone) from the list of storage locations.
  - Open the StraboField folder.
  - Inside, open the ProjectBackups folder to view all saved backups.

### 3. Access the Backup File: Android

- Select the project from the saved projects on the device → Export
- Go to My Files (Android) → Downloads → StraboSpot2 → Backups → (your project).zip
- Long press to bring up additional options.

## Step-by-Step Instructions: Share

### 1. Share the Project via AirDrop: iOS

- Long-press on the desired backup file.

- Select Share from the menu, then tap AirDrop.
- Available nearby devices will appear.
- If no devices appear:
  - Ensure the receiving device has AirDrop enabled.
  - Set AirDrop visibility to Everyone or Contacts Only.
  - If the sender is not in the receiver's contacts, choose Everyone.

### **Accept and Save the File on the Receiving Device via Airdrop: iOS**

- On the receiving device, select Open with Files when prompted.
- Navigate to: StraboField → ProjectBackups.
- If the ProjectBackups folder does not exist:
  - Tap the New Folder icon in the top-right corner.
  - Name the folder exactly: ProjectBackups (case-sensitive).
- Select the folder, then tap Save.

### **2. Share the Project: Android**

- Send the .zip file using email or bluetooth from your android device.

### **3. Import the Project: Android**

- Open the **StraboField** app on the receiving device.
- Navigate to MyStraboSpot → Import Project screen.
- Navigate to My Files → Internal Storage → Backups → Your Project
- Unzip the file and Save
- Project will be in the Saved Projects page (device will automatically navigate to Saved Projects) with an appended EXP-year-month-day-time
- Select the backup file from the ProjectBackups folder.
